

Nuclear Safety Policy – DELTAFLUID

In all its activities, DELTAFLUID treats nuclear safety as a top priority, inseparable from the quality of its products and services. Our nuclear safety policy is based on the following commitments:

1. Priority of nuclear safety

Nuclear safety takes precedence over all other considerations.

It guides all of our decisions, regardless of cost, time, or organizational constraints.

2. Developing a safety culture

We are committed to:

- Developing and maintaining a strong nuclear safety culture within the company,
- Training all staff in the fundamental principles of nuclear safety and ensuring that their skills are maintained over time,
- Raising awareness of the risks associated with our activities.

3. Risk and Process Management

We are committed to:

- Managing all risks associated with our business operations,
- Maintaining a questioning and rigorous approach at every stage of our processes,
- Ensuring the robustness and effective management of our operations.

4. Product traceability and compliance

We are committed to:

- Ensuring full traceability, from raw materials through to delivery,
- Maintaining control over our entire subcontracting chain,
- Working closely with our partners to ensure service compliance,
- Ensuring our products comply with applicable requirements,
- Maintaining high standards in our inspection and validation activities.
- Ensuring compliance with requirements regarding safety, quality, traceability, deadlines, and costs,

5. Integrity, Transparency, and Fraud Prevention (CFSI)

DELTAFLUID has a zero-tolerance policy toward any form of fraud, tampering, or suspicious products.

As such, we are committed to:

- Implementing appropriate preventive measures and controls,
- Detecting and addressing any CFSI-related incidents,
- Ensuring the integrity of data and products.

We encourage:

- Reporting discrepancies, anomalies, and non-conformities, while fostering a culture of non-blame,
- A culture of transparency and accountability,

The implementation of this policy relies on the involvement of all staff, who must demonstrate vigilance, rigor, and professionalism at every stage of their work.

Management is committed to providing the necessary resources for its implementation and to ensuring its dissemination and understanding.

The QSE-SN Manager has the independence and authority necessary to oversee matters related to nuclear safety and quality, with direct and unrestricted access to Management.
